

# Sustainable value creation

Hands-on ownership. Real impact. CapMan creates value by setting ambitious sustainability targets, driving measurable change across the portfolio, and positioning assets for premium exits with a solid foundation for the next owner.

**Equity value without active sustainability measures**

## **Value at risk**

Unmanaged risks (climate, nature, human rights) and governance gaps can lead to

- operational disruption
- legal and reputational exposure
- more volatile earnings

## **Value preservation and creation**

Active ownership and targeted sustainability actions help

- mitigate risk and identify sustainable products and services
- staying ahead of regulatory trends
- attracting and retaining talent
- improve efficiency
- expand financing and commercial options

While some measures involve upfront cost, they support

- more stable cash flows
- higher equity value
- stronger exits

**Equity value after active sustainability measures**
